

VENKATESH BS

Full Stack AI Engineer - Building AI-Powered Applications on Scalable Cloud-Native Backends

batikerisvenkatesh@outlook.com | +91-8904195663 | Languages: English, Kannada, Telugu | Bengaluru - 560032, Karnataka

PROFESSIONAL SUMMARY

Full Stack AI Engineer with 6+ years of experience in Application Development, Back-end Engineering, Cloud-Native Solutions, and AI/ML Integration. Nearly 3 years of AWS cloud exposure with expertise in microservices architecture, RESTful APIs, and scalable enterprise systems. Proven track record of accelerating deployment lifecycle by 40% and achieving 50% reduction in response time through database optimization and Redis caching strategies. Currently building production-grade Generative AI and LLM-powered applications, including Retrieval-Augmented Generation (RAG) pipelines, prompt engineering, and AI API integration across full-stack web technologies.

TECHNICAL SKILLS

Programming Languages:

JavaScript, TypeScript, Java, Python, SQL

Back-end:

Node.js, Express.js, Next.js (API Routes), Java (Spring Boot), Python (Pandas, PySpark)

BaaS & Realtime:

Supabase (PostgreSQL, Row-Level Security, Realtime, Auth), Firebase

AI & Machine Learning:

Generative AI, Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), Prompt Engineering, OpenAI API, LangChain, AI Agent Development, AI-Powered API Development, Hugging Face Transformers, NLP, Machine Learning Model Integration, TensorFlow (Basic), Scikit-learn, AI Playground, Vibe Coding (Next.js/Node.js)

Tools & Methodologies:

Git, Agile/Scrum, JIRA, CI/CD, Microservices Architecture

Front-end:

Angular, React.js, Next.js, HTML5, CSS3, Bootstrap, jQuery

Databases:

MySQL, OracleDB, PL/SQL, MongoDB, PostgreSQL

Cloud & DevOps:

AWS (EC2, S3, RDS, IAM, API Gateway, Lambda, Glue, EventBridge, ALB), Docker, Nginx, Linux/Unix

Messaging & Caching:

RabbitMQ, Redis

WORK EXPERIENCE

FREELANCER (INDEPENDENT / REMOTE)

Jan 2026 - Present (9 months)

Full Stack AI Engineer

- Actively upskilling in Artificial Intelligence with a focus on Generative AI, Large Language Models (LLMs), and AI-powered application development
- Building and shipping AI-powered applications end to end, pairing modern front-end frameworks with Java and Node.js back-end services
- Designing and evaluating Prompt Engineering strategies and Retrieval-Augmented Generation (RAG) pipelines for context-aware, domain-specific AI solutions
- Integrating third-party AI APIs into full-stack web applications, developing AI agents and intelligent automation workflows
- Delivering AI integrations on AWS cloud infrastructure with containerized services, REST APIs and scalable deployment pipelines
- Exploring practical AI use cases across enterprise and product domains to validate real-world impact and ship production-ready solutions

INFOSYS BPM, Bengaluru

Aug 2025 - Dec 2025

Consultant

- Delivered enterprise application solutions as a Consultant, collaborating with cross-functional teams to meet client requirements
- Developed and maintained scalable back-end services using Node.js and Express.js
- Integrated AI-powered automation tools into existing workflows to enhance operational efficiency
- Participated in Agile ceremonies and contributed to sprint planning and delivery
- Worked on API development and integration for business process management solutions

Technical Lead

- Delivered end-to-end development of enterprise applications using Spring Boot and Angular, enhancing system performance and user experience
- Architected cloud-native microservices and RESTful APIs on AWS, achieving 40% improvement in deployment efficiency
- Engineered ETL workflows leveraging AWS Glue, Lambda, and S3 for scalable and automated data pipelines
- Led and mentored a team of 5-7 developers, driving Agile delivery and ensuring timely sprint completion
- Optimized database structures and queries, resulting in 50% reduction in response time for high-traffic systems
- Collaborated with Product Owners and Analytics Teams, improving customer satisfaction by 20%
- Enhanced front-end performance by 30% using modular architecture and lazy loading strategies
- Created and experimented with AI Playground environments for rapid prototyping and testing AI models

INTEGRA MICROSYSTEMS, Bengaluru

Senior Software Engineer (Dec 2021 - Apr 2023) | Software Engineer (Nov 2019 - Dec 2021)

- Led development of scalable back-end systems using Node.js and Express.js for banking and kiosk-based platforms
- Optimized API Gateway for authentication, rate limiting, and service routing to enhance system scalability
- Implemented Redis caching mechanisms, improving system response time by 60%
- Orchestrated asynchronous workflows using RabbitMQ for reliable background processing and notifications
- Designed responsive user interfaces via Angular, HTML, CSS, and jQuery for enterprise applications
- Developed and optimized SQL queries, stored procedures, and functions across MySQL and OracleDB
- Deployed applications using Nginx reverse proxy, enabling load balancing and secure access
- Delivered secure REST and SOAP APIs, ensuring seamless integration with external systems
- Conducted R&D on React and Angular frameworks for cross-platform application development
- Developed proof-of-concepts to evaluate scalability, performance, and integration capabilities

FREELANCE PROJECTS (JAN 2026 - PRESENT)

AI-Powered Job Application Automation Platform

React | Next.js | TypeScript | Node.js | Supabase (PostgreSQL) | OpenAI API

- Built a full-stack platform that automatically fills job application forms and matches resumes to job descriptions, reducing manual application time by 70%
- Engineered AI resume-parsing and scoring pipeline using Next.js API Routes and OpenAI API, improving match accuracy by 35%
- Designed secure authentication and data storage with Supabase Auth and PostgreSQL tables using Row-Level Security, with realtime status tracking via Supabase Realtime

Real-Time Analytics & Reporting Dashboard (SaaS)

React | Next.js | TypeScript | Node.js | Supabase (PostgreSQL, Realtime)

- Developed a multi-tenant SaaS dashboard serving 50+ monthly active users with role-based access via Supabase policies
- Designed normalized PostgreSQL schemas, views, and optimized SQL queries for fast aggregations over 1M+ rows
- Created RESTful APIs and server-side rendering with Next.js, cutting initial page load time by 45%, with live KPI updates via Supabase Realtime

E-Commerce Order Management System

Next.js | React | TypeScript | Node.js | Supabase (PostgreSQL) | Stripe

- Delivered an end-to-end e-commerce platform featuring product catalog, cart, and order lifecycle management
- Implemented secure payment integration and idempotent webhook handling in Node.js, reducing failed transactions by 25%
- Built SQL functions and triggers in Supabase to enforce inventory rules and generate order analytics, optimized with Next.js ISR for 3x peak traffic

AI Document Processing & Resume Parser

React | Next.js | TypeScript | Node.js | Supabase (PostgreSQL) | OpenAI API

- Created a document-processing microservice that extracts and structures data from resumes and invoices via AI
- Processed 10K+ documents with 92% extraction accuracy using prompt-engineered OpenAI models and persisted records into Supabase PostgreSQL with full-text search
- Containerized services with Docker and exposed typed TypeScript SDKs for client integration

CORE COMPETENCIES

Full Stack AI Application Development | Generative AI & LLM Integration | Retrieval-Augmented Generation (RAG) | Prompt Engineering | AI API Integration | AI Agent Development | Full Stack Application Development | Cloud-Native Solution Engineering | Microservices Architecture | API Development & Integration | Scalable System Design | Back-end Engineering & System Optimization | Front-end Architecture & Performance Engineering | Data Processing & ETL Workflows | Agile Delivery & Sprint Management | Technical Leadership | Intelligent Automation

EDUCATION

Bachelor of Technology - Information Science

Brindavan College of Engineering, 2018
